

The Class 6 Industrial Ethernet SmartMotor™, which is available in both standard servo (shown) and hybrid servo versions, represents the next step in the evolution of the SmartMotor integrated motor design. The Class 6 motor lineup includes PROFINET®, EtherCAT® and EtherNet/IP™ versions.

These motors are designed for maximum performance and connectivity. They incorporate a high-end, high-speed processor for exceptional performance, data update rates are as fast as 1 millisecond. There are dual industrial Ethernet ports onboard (no hub or switch required), as well as connections for RS-485 and USB. Additionally, they provide plenty of I/O, with the option to add more through an external expander, for easy integration into any system.

Key Features and Benefits

- Simplify wiring, reduce cost through the onboard dual-port Ethernet switch
- Optionally program, configure and get live diagnostics through the USB interface
- Optionally communicate with the motor through the RS-485 half-duplex port, which provides access as a Modbus Remote Terminal Unit (RTU) Slave
- Easily access SmartMotor programmable autonomous control features in slave mode, which allows special user-programmed functions
 - Reduce limit switch wiring and PLC programming through adaptable distributed control
 - Accurately capture position for high-speed registration applications
 - Quickly reduce costs and improve reliability through use of programmable homing and limits
 - Precisely define motion profiles with local cam execution
 - Easy configuration and status monitoring of Industrial Ethernet and field buses
 - Actively monitor/troubleshoot each motor through local error reporting and diagnostic codes
- Local/standalone benefits (see manual for details):
 - Simplify programming and calculate 32-bit precision motion parameters on the fly with floating-point math and trigonometric functions
 - Govern a move by running it on top of a gearing or camming relationship using the dual trajectory generators
 - Create precise spooling/winding shapes and control tension through advanced gearing (supports preset traverse/take-up parameters)
 - Create complex patterns through advanced camming (with cubic spline interpolation and dynamic frequency/amplitude)
 - Highly configurable local I/O for motion control and general-purpose use in user programs:
 - Drive enable input, fault output, travel limits, registration and position capture
 - External encoder input supporting A-quad-B or Step-and-Direction
 - Total of 7 configurable inputs
 - High-current outputs with external brake-control function
